

PRONANO

FOR A HEALTHIER INDOOR CLIMATE

THE **CLEAR** AND **CLEAN** SOLUTION

**REDUCED RISK OF GERMS,
MOLD, BACTERIA, ...**

**HEALTHIER
AIR**

**REDUCED RISK OF
ALLERGENS AND
UNWANTED ODOURS**

PRONANO: HEALTHY WORKING, HEALTHY LIVING ENVIRONMENT

Due to the accumulation of germs, fine dust, allergens such as house dust mite, bad odours and other unwanted pollution, the health of employees, residents and visitors is negatively affected. Not all surfaces are sufficiently treated by regular cleaning. Some surfaces are too difficult to access (ceilings, air ducts...) and others aren't being cleaned frequently enough (carpets, curtains, radiators...).

According to the World Health Organization (WHO), 30% of all buildings suffer from Sick Building Syndrome (SBS). That is why the Pronano ultrasonic nebulizer has been developed that permanently treats **ALL surfaces** with Synbio® technology.

PRODUCT INFORMATION

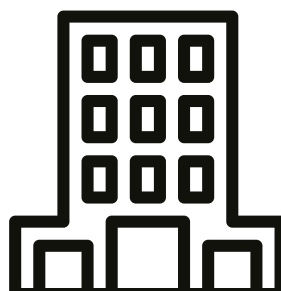

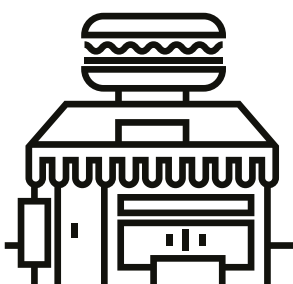

- o **Product:** Ultrasonic nebulizer for synbiotics
- o **Purpose:** Healthy microflora on all surfaces: less germs, allergens, fungi, odors and pollution.
- o **Effects:** Reducing infections and absenteeism resulting in higher productivity.
- o **Scientifically proven**
- o **User friendly:**
 - o Rechargeable battery via USB
 - o Charging + refill replacement: approximately 45 days
 - o Automatic nebulizer 8x per day (± 112 million probiotics)
 - o Up to 100m³
 - o Floor-standing aswell as wall mounted

HEALTHCARE

SYNBIOTIC ENVIRONMENTAL TREATMENT

Through the patented Synbio® technology, the entire indoor environment is made healthier by **optimising a healthier microflora** on ALL surfaces; even those that are inaccessible for ordinary cleaning.

Synbiotics

Synbiotics is the combination of probiotics and prebiotics:

Probiotics: Good bacteria that promote human and animal health.

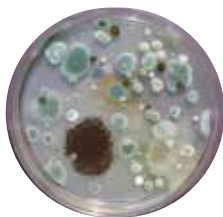

Prebiotics: Nutrients that stimulate good environmental bacteria.

Securities

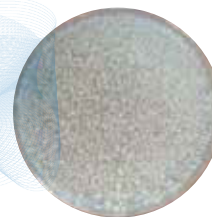

Synbiotic environmental treatment provides the following effects:

- Healthy microflora on all surfaces with reduced risk of germs and mould
- Less allergens
- Less pollution
- Fewer unwanted odours

Poor microflora

Good microflora

OPERATION

Ultrasonic sound waves form synbiotic charged water particles barely 1 µm in size (one thousandth of a millimeter!). This gives a very fine synbiotic mist that is immediately distributed throughout the air and all spaces. The pre- and probiotics can be applied to all surfaces in the room. The Pronano ultrasonic atomizes approximately **1 million probiotics per second**, which means that the entire room is filled with good bacteria after just a few minutes. The prebiotics then ensure the further development of a good microflora.
